Lab6 – Assignment
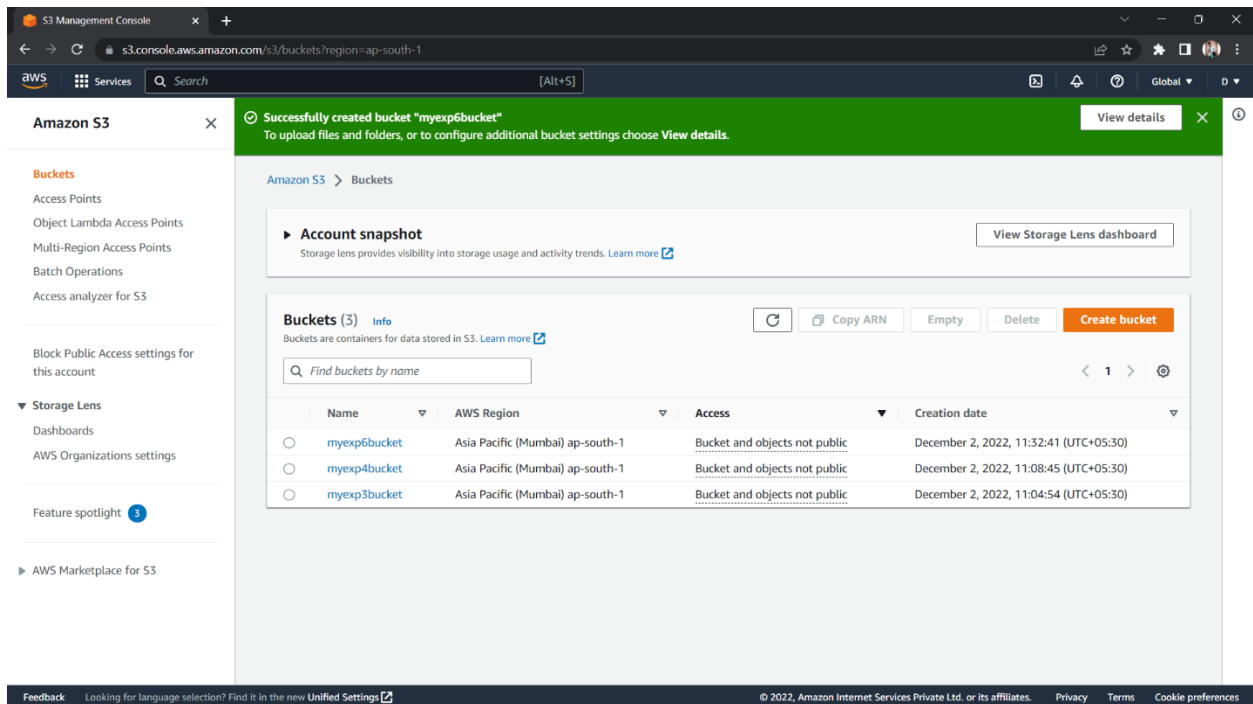

Name: Deepchand Jagdish Prajapati
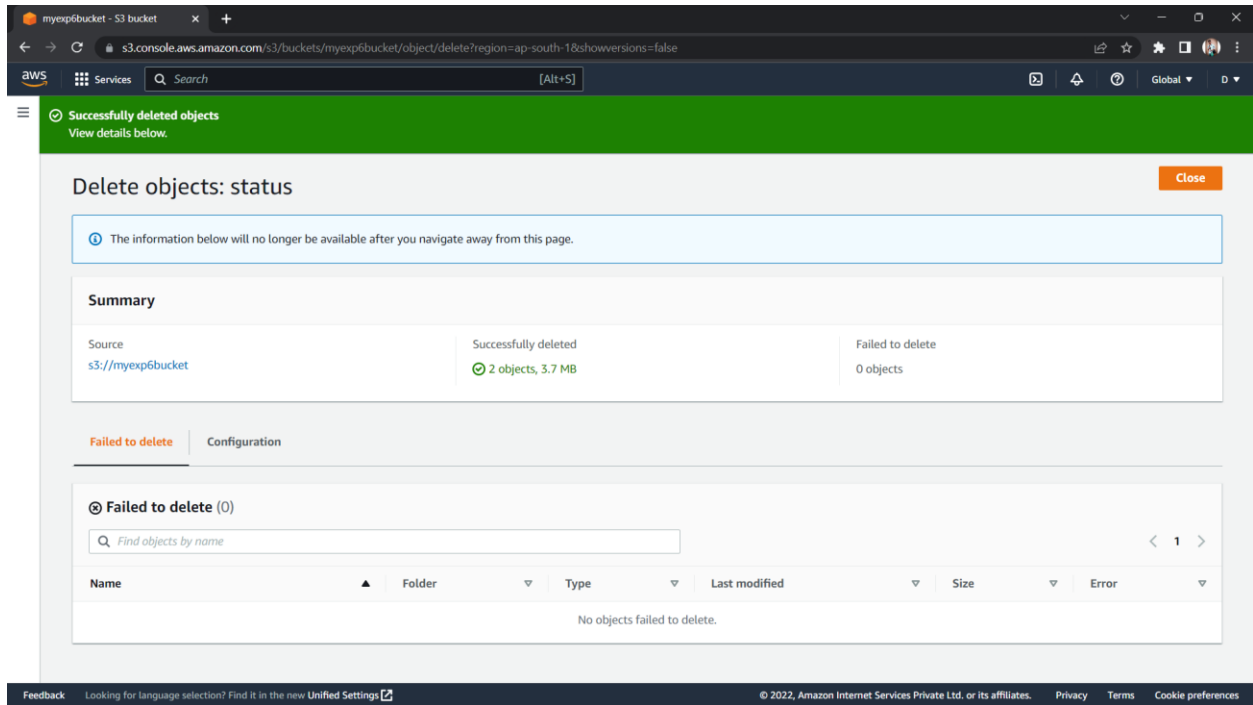

Roll No.: - 310

Batch: CCF1

Question: Create S3 bucket delete 2 Objects from bucket and show delete marker.

Step 1: First log in to your AWS console account and search **S3** in the search bar and then click on the **Create Bucket** button after that give the appropriate name to the bucket, make sure that you have check show versioning **Enable** and finally click on the create button.

Step 2: Go inside the bucket and select the objects that you would like to delete now in the Actions options you will find the Delete option click on it and type '*delete*' then click on **delete** button.

Step 3: Go inside the created bucket and there you will find all the uploaded objects on the top there is one button called show versions click on that it will display *Delete Marker.*
